Technical and analytical Physics & Astronomy student with experience in automation, workflow optimization, data analysis, and cross-functional problem solving. Skilled in Python, SQL, and structured systems thinking with experience improving operational workflows, coordinating technical projects, and translating business requirements into scalable solutions in fast-paced environments.

EDUCATION

York University

Toronto, ON

Bachelor of Science (B.Sc.), Specialized Honours in Physics & Astronomy

Sept. 2022 – Expected Jan. 2027

- Relevant Coursework: Calculus I–V, Linear Algebra, Statistical Methods, Programming, Computational Methods, Data Analysis
- Ranked Top 10 out of 150 students in the Physics Experiment Poster Challenge for presenting analytical research findings and technical concepts

SKILLS

Programming Languages:	Python (Pandas, NumPy), Java, C/C++, JavaScript, SQL
Software Engineering:	Object-Oriented Programming, Data Structures, Algorithms, Debugging, Technical Troubleshooting, Root Cause Analysis, Problem Solving
Operations & Coordination:	Cross-Functional Collaboration, Project Coordination, Workflow Optimization, Process Improvement, Operations Support, Technical Documentation
Tools & Technologies:	Git, GitHub, Linux, REST APIs, VS Code, Jupyter Notebook
DevOps & Infrastructure:	CI/CD Concepts, Docker (basic), Automation Scripting, System Configuration, Data Pipelines (basic)
Data & Analytics:	Data Cleaning, Statistical Analysis, Data Modelling, Data Visualization, Machine Learning (scikit-learn)

EXPERIENCE

Business Development Manager

May 2025 – Present

Loopr Marketing (Video Games Industry Marketing)

Toronto/Montreal, ON

- Developed Python automation scripts to streamline operational reporting workflows, reducing manual processing time by 40%+ and improving consistency of recurring reporting outputs
- Built and maintained SQL-based tracking workflows for 15+ weekly leads against a 10-lead target, exceeding pipeline targets by 50%+ and improving reporting visibility across outreach initiatives
- Standardized 3 core reporting workflows across lead tracking, campaign performance, and outreach follow-ups, improving data consistency and reducing manual review requirements
- Coordinated with cross-functional stakeholders across Canadian and U.S. markets to translate operational requirements into scalable tracking workflows and reporting systems

Sales Representative

Aug. 2023 – May 2025

ASR Building Supplies (Construction Supply)

Mississauga, ON

- Processed and tracked 25+ daily B2B client orders against a 10-order team average, maintaining accuracy across transaction records, product specifications, and operational systems
- Identified recurring purchasing patterns across contractor accounts, reducing product selection time by 30%+ and improving efficiency in service and transaction workflows
- Translated project requirements into accurate product selections while navigating inventory constraints, recommending alternatives to reduce delays and support execution timelines

IT Support Specialist

Jun. 2022 – Aug. 2023

KlueTek (Individual & Corporate IT Solutions)

Toronto, ON

- Diagnosed and resolved technical issues across 150+ client systems through structured root cause analysis across software, hardware, and network environments
- Configured and deployed IT systems for 20+ client projects, including device setup, network configuration, and software installation to ensure operational readiness
- Automated repetitive troubleshooting and setup tasks using scripts, improving daily issue resolution capacity by 50%+ and increasing consistency across support workflows

PROJECTS

Data Processing & Validation Tool — Python

- Built a Python-based data processing tool to ingest, clean, validate, and export raw datasets into structured CSV/JSON outputs
- Designed modular parsing, validation, and error-handling functions to improve data integrity across multiple input formats
- Implemented reusable workflow components for cleaning, transformation, and output generation, reducing repeated manual processing steps
- Developed unit tests to validate functionality across multiple input scenarios, improving reliability and detection of edge cases

Galactic Data Analysis Pipeline (PGC-70419) — Python, DS9, IRAF

- Processed and cleaned large observational astronomy datasets using Python, DS9, and IRAF to support reliable downstream analysis
- Applied validation checks and consistency controls to identify data quality issues and improve accuracy of processed results
- Analyzed extracted measurements using statistical methods to identify meaningful patterns in observational data
- Documented methodology, workflow, and findings in a technical report, emphasizing reproducibility, structured analysis, and clear communication of results

LEADERSHIP & ACHIEVEMENTS

Computer Science Club Co-Founder

- Co-founded and organized a student-led programming initiative focused on problem solving, collaboration, and technical skill development
- Facilitated peer learning and engagement through discussions and collaborative problem-solving sessions
