Omeed Lodin

Ajax, ON | 289-600-4349 | omeed_lodin@live.com | linkedin.com/in/omeed-lodin | github.com/OmeedLodin | omeedlodin.github.io

Physics & Astronomy student (B.Sc., York University, 2027) seeking an entry-level **data analyst**, **machine learning**, or **AI training and evaluation** role. Builds **Python** data workflows (NumPy, Pandas, Matplotlib, scikit-learn) with **Git** on **Linux**: cleaning survey data, checking class balance and feature correlations, and training and evaluating a **classification baseline**. Physics training in **statistics, uncertainty analysis, and curve fitting** across mechanics, electromagnetism, thermal, and modern physics; documents methods and uncertainties in formal technical reports. **Eligible for Canadian security clearance**; open to relocation.

Education

York University Sept. 2022 – Exp. 2027
B.Sc. Physics & Astronomy *Toronto, ON*

- **Data & Computing:** Experimental Physics with Data Analysis, Computational Methods for Physicists, Introduction to Computing for the Physical Sciences (in progress); Practical Data Science Methods in Physical Sciences (Winter 2027)
- **Math & Physics:** Linear Algebra, Differential Equations, Classical Mechanics, Electromagnetics I, Statistical & Thermal Physics, Modern Physics; Quantum Mechanics (Winter 2027)
- Ian and Dorothy MacDonald Award; **Top 10 of 150**, Physics Experiment Poster Challenge (2024); Ontario Scholar (96% average)

Skills

Programming: Python (NumPy, Pandas, Matplotlib, scikit-learn), C/C++, MATLAB, Linux command line, Git/GitHub
Data & ML: Data cleaning and validation, exploratory data analysis, feature correlation analysis, data visualization, classification, train/test splits, feature scaling, model evaluation
Statistics: Uncertainty propagation, curve fitting, error analysis, statistical methods for experimental data
Tools & Other: Excel, DS9, IRAF, technical writing; eligible for Canadian security clearance; English, Farsi, Dari (fluent)

Data Projects & Lab Work

Stellar Classification (In Progress) | Python, Pandas, scikit-learn, Git 2026

- Building a star / galaxy / quasar classifier on **SDSS DR18** survey data with one collaborator, version-controlled on GitHub
- Cleaned the data and analyzed class distribution and feature correlations (correlation heatmap) to guide feature selection
- Built a **logistic-regression baseline** with a train/test split, feature scaling, and a classification report; next: stratified split and class-imbalance handling, then comparing other models

Galactic Observation & Data Analysis (PGC-70419) | Python, DS9, IRAF Dec. 2023

- Processed CCD imaging data from York's observatory telescope to measure properties of the galaxy's nucleus
- Wrote a formal technical report documenting the method, measurements, and findings

Experimental Physics Labs | York University 2022 – Present

- Ran Rutherford scattering, Millikan oil drop, and Cavendish torsion balance experiments; recorded readings in a lab notebook
- Analyzed results with uncertainty propagation and curve fitting, and reported them in formal lab reports

Work Experience

Computer Forensics Intern Summer 2026
KlueTek (Individual & Corporate IT Solutions) *Toronto, ON*

- Ran forensic triage scripts on compromised client devices to identify the source of compromise; kept records confidential

Business Development Manager May 2025 – May 2026
Loopr Marketing (Video Games Industry Marketing) *Toronto/Montreal, ON*

- Generated **15+ qualified leads per week** against a 10-lead target; tracked contacts, responses, and follow-ups in a spreadsheet log

Sales Representative Aug. 2023 – May 2025
ASR Building Supplies (Construction Supply Company) *Mississauga, ON*

- Served contractors at a high-volume counter; cut deal-closing time by roughly **30%** through dedicated closing meetings

IT Support Specialist June 2022 – Aug. 2023
KlueTek (Individual & Corporate IT Solutions) *Toronto, ON*

- Supported **50+** clients in person and remotely, diagnosing and resolving hardware and software faults; kept service records
